

Criterion E: Evaluation

Evaluation of the product

The success criteria of the product were the following:

- Students may submit group quizzes and the quiz grade and number will be sent into a spreadsheet
- The teacher will be able to see the spreadsheet and all grades
- Students will be able to see their past grades
- Students will be able to see their grade average
- System will be organized according to student ID number

As demonstrated in the evidence of functionality video, students may enter group quizzes into the website and they will be entered into a master spreadsheet which is owned by the teacher. The teacher is able to view all students and their grades. Students also may see their past grades, as well as a grade average for their previous quizzes. The system is organized by student ID number which is recognized by the school and therefore is easy to use. All success criteria were met. In addition, it was disabled for students to re-submit quiz grades.

Recommendations for further development

When demonstrated to the client, Mr. Campisi, feedback was given that there should be a way for students to enter in group quiz retake grades in a way that allows him to view both their original grade as well as the new grade. In the future this could be implemented in multiple ways. There could be a second sheet within the document that contains grades for retakes. An additional possible feature for this project that could be implemented in the future is the ability for the grade average to recalculate when new grades are entered. It currently only calculates grades when the page is loaded.
